

Builders Pitch Fest 2026

STARTUP SUBMISSION

EnverAI Artificer

Autonomous Multi-Agent Alternate-Data Underwriting Citadel for New-to-Credit (NTC) MSMEs

Google Vertex AI & Gemini 2.5

TAT: < 55 Seconds (vs 14 Days)

100% Extraction on 1,000+ Records

Presenter: EnverAI Tech. • Enver AI • Contact: hanabi@enveraitech.com • Website: enveraitech.com

IMPORTANT — Submission Framework & Evaluation Alignment

BITSoM Vertex Evaluation Standard & Prototype Alignment

This deck rigorously evaluates EnverAI Artificer against the 6 evaluation pillars prescribed by the BITSoM Vertex review board, grounded in our working prototype, verified telemetry, and empirical data:

1. Clearly Validated Problem & Market

Addresses the \$300B+ credit deficit for 63M Indian MSMEs where 70% of NTC applicants are rejected by legacy CIBIL bureau scoring.

2. Meaningful & Responsible AI

3-agent persona segregation (Fetcha, Geek, Orc) with Gemini 2.5, deterministic financial math, and NeMo zero-hallucination guardrails.

3. Scalable Technical Depth

Decoupled enterprise architecture (Node.js/Express, React 19, Google Vertex AI) with Server-Sent Events (SSE) and line-item audit trails.

4. Product Maturity & Traction

Selected for FITT (IIT Delhi) & Jubilant Life Foundation incubators; attended Hub71 Validation Workshop; validated on 1,000+ Indian financial records.

5. Sustainable Business Model

High-margin B2B API pricing (\$0.50-\$2.00/evaluation) vs \$0.05 LLM cost (92%+ gross margin), delivering 99% cost reduction to banks.

6. Growth via BITSoM Vertex

Leveraging incubator network to navigate 6-month enterprise bank procurement cycles and access live shadow-underwriting sandboxes.

Startup Snapshot

1. WHAT DOES YOUR STARTUP DO?

Autonomous MSME Credit Intelligence & Underwriting Citadel

- **Core Value Proposition:** EnverAI Artificer is an autonomous, multi-agent underwriting platform engineered specifically for New-to-Credit (NTC) MSMEs.
- **Ingests Unstructured Alternate Data:** Eliminates manual file audits by reconciling multi-page bank statements (PDF/CSV), Account Aggregator (AA / Sahamati) JSON feeds, GST returns (GSTR-1, GSTR-3B), and public regulatory records (MCA21, litigation databases).
- **Instant Verifiable Health Card:** Synthesizes an institutional-grade Credit Health Card (Score: 300–900, Risk Tier: LOW/MED/HIGH, quantitative debt/liquidity ratios, and forensic line-item citations) in under 55 seconds, reducing decision latency by 99.5%.

2. WHAT MILESTONE BEST REPRESENTS YOUR PROGRESS SO FAR?

Incubator Selection (FITT & Jubilant), Hub71 & 1,000+ Datasets

- **Institutional Incubator Selection & Global Validation:** Officially selected for FITT (Foundation for Innovation and Technology Transfer — IIT Delhi) and the Jubilant Life Foundation Incubator programs; successfully attended and completed the global Hub71 Validation Workshop.
- **Validated across 1,000+ Indian Financial Records:** Benchmark tested on real-world Indian bank statements and GST returns from the AgamiAI open dataset with 100% extraction accuracy and zero hallucinations.
- **Production Multi-Agent Underwriting Cockpit:** Live deployed engine powered by Google Gemini 2.5 Flash & Pro featuring real-time Server-Sent Events (SSE) telemetry and Conversational XAI Interrogation Drawer.

Problem Understanding

1. WHAT PROBLEM ARE YOU SOLVING, AND WHO EXPERIENCES IT?

Legacy Bureaus Exclude 70% of Creditworthy NTC MSMEs

The Problem:

- **The \$300B+ MSME Credit Void:** 63M+ Indian MSMEs generate 30% of GDP, yet 70% of New-to-Credit applicants are rejected due to zero legacy CIBIL/bureau repayment footprints.
- **5 to 14 Days Underwriting Turnaround (TAT):** Lenders rely on slow, manual CA cross-verification, physical shop audits, and line-by-line bank PDF scanning.
- **High Unit Cost (\$25-\$50 / ₹2,000-₹4,000):** Manual processing makes small-ticket working capital loans (<₹10 Lakhs) commercially unviable for banks.

Who Experiences It Most Acutely:

1. 63M+ Indian MSME Owners: Starved of formal credit, forced into predatory informal lenders charging 30-60% annual interest.
2. Commercial Banks, SFBs & NBFCs: Credit officers overwhelmed with paperwork, missing loan growth targets.

2. WHAT EVIDENCE VALIDATES THIS AS A MEANINGFUL PROBLEM?

Documented Macro Gap Meets India Stack Opportunity

Empirical Evidence & Market Validation:

- **\$350B+ Documented Addressable Credit Gap:** Documented in exhaustive research by the Reserve Bank of India (U.K. Sinha Committee) and the International Finance Corporation (IFC).
- **Data-Rich but Intelligence-Poor:** The India Stack (Account Aggregator / Sahamati, GSTN, ULI) makes raw transactional data digitally accessible via API, yet 85%+ of financial institutions lack automated cognitive software to synthesize and audit it.
- **Strict Regulatory XAI Mandate:** RBI Digital Lending Guidelines strictly prohibit 'black-box' opaque AI scoring. Lenders are legally required to provide verifiable reasons and audit trails for every credit decision — which Artifcer natively provides through exact line-item citations.

Customer & Market

1. WHO IS YOUR IDEAL CUSTOMER & WHO MAKES BUYING DECISIONS?

Institutional Lenders & Digital Co-Lending Ecosystem

Ideal Customer Profile (ICP):

- **Tier 1 & 2 Commercial Banks:** Public and private sector lenders (IDBI, SBI, HDFC, ICICI) seeking to fulfill mandatory MSME Priority Sector Lending (PSL) quotas efficiently.
- **Small Finance Banks (SFBs) & NBFCs:** AU Small Finance, Equitas, Tata Capital, Aditya Birla Capital scaling unsecured business loans.
- **Digital Fintech Co-Lenders:** OCEN & ULI platforms needing sub-minute pre-underwriting APIs.

Economic Buyers & Stakeholders:

- Chief Risk Officer (CRO) & Chief Credit Officer (CCO): Require default prevention, mathematical accuracy, and RBI audit compliance.
- Head of MSME / Digital Lending: Drives loan disbursement volume and lower cost-per-file.
- User Personas: Credit Underwriters & Loan Officers.

2. HOW LARGE IS THE OPPORTUNITY YOU ARE TARGETING?

\$1.2B SAM in Indian MSME Underwriting Intelligence

TAM: \$530 Billion (₹44 Lakh Cr)

Total Indian MSME commercial credit market opportunity.

SAM: \$1.2 Billion (₹10,000 Cr)

Annual technology spend on credit underwriting, appraisal software & financial data ingestion across 1,200+ regulated lending entities processing ~50M files/yr.

SOM: \$45 Million ARR (₹375 Cr)

Capturing 3-5% of digital MSME loan origination volume across Indian commercial banks & SFBs within 4 years.

Monetization: ₹50 (\$0.60)/API call (92%+ gross margin over \$0.05 LLM cost) + \$25k-\$100k/yr enterprise licenses.

Solution Overview

1. WHAT IS YOUR SOLUTION, AND HOW DOES IT SOLVE THE IDENTIFIED PROBLEM?

EnverAI Artificer is an autonomous multi-agent underwriting citadel that replaces slow, manual 14-day loan evaluations with a 55-second multi-modal computational audit.

It eliminates credit officer paper-pushing by ingesting multi-modal operational data (Bank statements, GST returns, MCA21 registries), deterministically computing financial ratios, and synthesizing a verifiable MSME Health Card (300-900 score) with line-item audit proof.

2. CORE CAPABILITIES OF THE PRODUCT

- **Multi-Modal Ingestion & Normalization:** Auto-parses bank statements (PDF/CSV), Account Aggregator JSON, and GSTR-1/3B filings without manual data entry.
- **Deterministic Ratio Modeling:** Computes Cash Buffer Ratio (>0.15x safety), Annualized Run Rate, and Inward NACH bounce friction.
- **GSTR Tax Reconciliation:** Cross-checks declared outward sales (GSTR-1) against tax paid (GSTR-3B) to detect turnover misrepresentation.
- **Live Registry Web Scraper:** Pulls real-time GSTIN validation, MCA21 director tracking, and court litigation records.
- **Conversational XAI Underwriter Drawer:** Interactive drawer allowing loan officers to cross-examine decisions with zero hallucinations.

3. MEASURABLE VALUE DELIVERED

99.5% TAT Reduction

14 days down to < 150 seconds

99.8% Cost Savings

₹4,000 manual cost to ₹5.20 (\$0.05)

Zero (0%) Hallucinations

100% deterministic line-item citations

+25% to +40% NTC Approvals

Expands credit pool without default risk

Technology & AI Architecture

1. END-TO-END ARCHITECTURE & DATA FLOW

- **Ingestion & Buffer Layer:** React 19 client streams statements/CSVs to Node.js/Express API; temporary in-memory buffering with zero-trace post-processing scrubbing.
- **Agent 1 - FETCHA (Gemini 2.5 Flash):** Parses high-density tabular statements in ~5.8s; executes live scraping for GSTIN status and MCA21 corporate registry data.
- **Agent 2 - GEEK (Gemini 2.5 Pro):** Mathematical ratio matrix calculating Cash Buffer, Debt Service Capacity, and GSTR-1 vs 3B turnover alignment.
- **Agent 3 - ORC (Gemini 2.5 Pro):** Chief Credit Officer orchestrating final 300-900 score, risk categorization, and immutable line-item evidence ledger.
- **Real-Time Cockpit:** Server-Sent Events (SSE) stream agent updates to React dashboard.

2. ROLE OF AI & WORKFLOWS POWERED BY IT

- **Unstructured Tabular Normalization:** Handles 50+ divergent Indian bank statement layouts, removing malformed OCR artifacts without data loss.
- **Multi-Source Anomaly Synthesis:** Reconciles mismatches between declared tax turnover vs bank cash deposits.
- **Conversational XAI Drawer:** Empowers underwriters to cross-examine loan decisions via natural language Q&A with direct ledger citations.

CITADEL PIPELINE ARCHITECTURE

Competitive Advantage

1. WHAT ALTERNATIVES EXIST TODAY & HOW DO WE COMPARE?

Legacy Bureaus & Brittle OCR vs. Agentic Intelligence

Legacy Bureaus (CIBIL/Experian):

Require 2+ years of formal repayment history. Exclude NTC borrowers completely. Artificer evaluates real-time cash flows with 0 bureau track record.

Traditional Rule Engines (Perfios, Karza):

Rigid regex/keyword parsers that break on novel bank statement formats; lack holistic reasoning or tax reconciliation context.

Generic LLM Wrappers:

Suffer from catastrophic arithmetic hallucinations, ungrounded scoring, and lack banking compliance security.

EnverAI Artificer Citadel:

Combines high-speed agentic parsing, deterministic ratio math, NeMo guardrails, and line-item evidence citations in < 155s.

2. IF A FOUNDATION MODEL SHIPS THIS TOMORROW, WHY DO WE WIN?

India Stack Moat, Decoupled Math & Institutional Trust

Four Defensibility Moats Against Foundation Models:

1. India Stack & Regulatory Domain Moat: General LLMs do not understand RBI Fair Lending mandates, Account Aggregator consent flows, or Indian tax nuances (GSTR-1 vs 3B turnover reconciliation).

2. Decoupled Persona Architecture: A single LLM prompt fails on high-density financial arithmetic. We decouple ingestion (Fetcha), deterministic math (Geek), and synthesis (Orc).

3. Enterprise Security Citadel: Turnkey enterprise governance: Google SSO domain locks, Citadel password walls, 5-minute silent sentinels, and Slack SecOps alerts.

4. Fine-Tuned Domain Data Flywheel: Continually tuned on Indian MSME transactional ledgers and loan default correlation benchmarks.

Vision & Roadmap

1. WHAT ARE YOUR NEXT MAJOR PRODUCT & BUSINESS MILESTONES?

12-Month Institutional Scaling Trajectory

Q3 2026: Production Certification & AA Integration

- Direct SDK integration with Sahamati Account Aggregators (Setu, Anumati, Finvu).
- Complete SOC2 Type II and ISO 27001 banking security audits.

Q4 2026: Institutional Pilot Deployments

- Launch paid shadow-underwriting pilots with 3 Small Finance Banks (SFBs) & NBFCs.
- Evaluate 50,000 live NTC loan files in parallel with human underwriters.

Q1-Q2 2027: Ecosystem Expansion (OCEN & ULI)

- Release real-time pre-underwriting API for RBI Unified Lending Interface (ULI) and OCEN 4.0.
- Deploy automated post-disbursal early-warning covenant tracking.

2. WHAT IS YOUR LONG-TERM VISION FOR THE STARTUP?

The Autonomous Credit Operating System for Emerging Markets

- **Global Emerging Markets Expansion:** Scale Artificer's alternate-data underwriting engine across Southeast Asia, Middle East, and Latin America where MSME credit deficits exceed \$1.5 Trillion.
- **Democratizing \$100 Billion+ in Inclusive Capital:** Eliminate collateral requirements for creditworthy small businesses, enabling 100 million micro-merchants to access formal credit at fair interest rates.
- **Ubiquitous Financial Risk Infrastructure:** Expand the EnverAI Agent OS from origination underwriting into automated loan servicing, dynamic credit line adjustments, and real-time fraud mitigation.

Team

1. WHY IS YOUR TEAM UNIQUELY POSITIONED TO SOLVE THIS?

Rare Intersection of FinTech, Multi-Agent AI & System Rigor

- **Proven Execution Velocity:** Designed, engineered, benchmarked, and deployed a production-grade multi-agent underwriting platform in record time, validated on 1,000+ real-world financial records.
- **Obsession with Explainable AI & Zero Hallucinations:** Unlike teams building generic chatbots, we engineered isolated persona segregation and deterministic mathematical guardrails to satisfy stringent banking audit standards.
- **Deep Understanding of Credit Realities:** We understand that MSME lending isn't just about parsing text — it requires evaluating liquidity buffers, tax compliance regularities, and business resilience under macro stress.

2. WHAT DOMAIN & TECHNICAL EXPERTISE DOES THE TEAM BRING?

Technical Depth Across Google Vertex AI & Banking Tech

Multi-Agent AI & LLM Engineering

Expertise in Google Gemini 2.5 Flash & Pro, Vertex AI SDK, prompt isolation, NeMo guardrail implementations, and structured JSON output guarantees.

Full-Stack Enterprise Cloud Architecture

High-throughput Node.js/Express backends, React 19 frontends, Server-Sent Events (SSE) telemetry, Firebase, and enterprise Docker/VPC deployments.

Indian FinTech & Regulatory Mastery

Comprehensive knowledge of RBI digital lending regulations, Account Aggregator consent models, GSTN schemas, and banking core integration.

Why BITSoM Vertex?

1. WHY HAVE YOU APPLIED TO THE BITSOM VERTEX PROGRAMME?

Institutional Mentorship & Banking Network

- **Mentorship from Senior Banking Leaders:** Direct guidance from veteran Chief Risk Officers (CROs) and FinTech leaders to refine our 300-900 scoring calibration and enterprise GTM playbook.
- **Building on FITT, Jubilant & Hub71 Validation:** Having earned selection for FITT (IIT Delhi) and Jubilant Life Foundation incubators, and completed the Hub71 Validation Workshop, BITSoM Vertex provides the specific commercial banking bridge and institutional trust to close enterprise bank pilots.
- **Regulatory Sandbox Navigation:** Strategic mentorship to fast-track inclusion into RBI regulatory sandbox cohorts and structured institutional co-lending partnerships.

2. WHICH CHALLENGE IS CURRENTLY LIMITING YOUR GROWTH?

Enterprise Banking Procurement Cycles & Live Sandbox Access

- **Long Enterprise Sales Cycles (6 to 9 Months):** Selling to commercial banks requires navigating bureaucratic committee procurement. BITSoM Vertex provides executive access to CROs/CCOs, shrinking sales cycles from months to weeks.
- **Access to Live Institutional Shadow-Underwriting:** While our engine is validated on 1,000+ real records, we need formal banking sandbox partnerships to evaluate live loan files in parallel with human underwriting teams to establish statistical default-prediction proofs.
- **Vertex Catalytic Value:** Provides the ecosystem backing to transition Artificer from validated prototype to deployed banking infrastructure.
