Enver AI Tech

Artificer – MVP.

Gemini that can show its working — for the MSMEs bureaus cannot see.

CIN U47190MH2023PTC402519 · GSTIN 27AAHCE5539J1ZA · DIPP193082

Eleven engineers. Different AI domains. One firm.

FOUNDER, CEO · APPLIED AI ARCHITECT

Amaan Shaikh

Built the Artificer agent fleet on Vertex / Gemini — ingestion, grounded scoring, the XAI drawer, and the GCP organisation it already runs on.

CO-FOUNDER & DIRECTOR · DIN 10154247

Needa Kaiser Shaikh

Governance, security posture, and the AI monitoring / evaluation layer. DPIIT-recognised entity.

01

Multi-agent systems

Four-agent fleet. Ingest, score, explain, lock.

02

Document intelligence

Indian bank PDFs, GST challans, statement layouts.

03

Quantitative telemetry

Deterministic financial ratios — math in code, not in the model.

04

Vertex AI / GCP

Gemini grounded scoring on the organisation already live.

05

Product cockpit

Officer workbench. Google SSO after CX.

06

MSME credit domain

NTC cash-flow underwriting. SL / RB / XAI language.

07

Guardrails & XAI

Schema rails, citation-led, temperature-0 scoring.

08

India Stack

GSTN, Account Aggregator, Sahamati, MCA, e-Courts.

09

SecOps & evaluation

AI monitoring, inactivity sentinel, Slack SecOps.

We did not start in credit.
Credit found the work.

Artificer is Enver's production MVP: an autonomous underwriting citadel for New-to-Credit MSMEs.

70% of New-to-Credit MSMEs are rejected on an empty bureau.

\$30B+

MSME credit deficit

70%

NTC files rejected by bureau scoring

3–5 days

Manual TAT vs 105 seconds

The book is real. The bureau is empty.

63M MSMEs · ~30% of GDP · 30 Lakh Crore credit gap-(RBI / IFC). CIBIL needs CIBIL needs a repayment history these firms do not have — even when cash when cash flow is real.

Fraud the eye misses.

Circular trading, spoofed PDFs, GSTR-1 vs GSTR-3B gaps. The document looks clean. The ledger is not.

Officers still line-read the file.

100+ page statements. 3–5 days. \$80–\$110 a file. TAT the borrower cannot survive and the bank cannot scale.

Black-box scores are now non-compliant.

RBI Digital Lending Guidelines forbid unexplained declines. Every no needs a reason the officer can stand behind.

A credit file in 105 seconds. With the working shown.

01

Bank statements

PDF / PSV · Indian layouts - the parsers already know.

02

GST returns

GSTR-1 vs GSTR-3B tax-gap check, not a screenshot.

03

Account Aggregator

Consented cash-flow. Sahamati-ready rails.

04

Public registries

MCA / CIN sets, invoices, anomaly flags.

<105S

SSE-streamed TAT vs 3–5 days

300–900

Health score band

5 pillars

Liquidity · revenue · stability ·
leverage · behaviour

\$0.02

AI cost per file vs \$80–\$150 manual

What the officer actually gets

A LOW / MED / HIGH health score with the five pillars opened. Citations back to the line in the statement or the GST return. Schema rails so the model cannot invent a ratio. Temperature-0 scoring. The file that used to take a week in a drawer- the officer can audit in a sitting.

Three RLHF agents. Then System-1. Math is the model. The LLM is the reader.

01 INGEST

Reads the Indian layouts. Bank PDF, PSV, GSTR, AA payload. Pages that look scanned still become a ledger.

02 GROUND

Every figure is pinned to a citation. No orphan number survives into the score.

03 SCORE

Five pillars computed in code. Liquidity, revenue, stability, leverage, behaviour — deterministic.

04 EXPLAIN

XAI drawer. The officer sees the the line, the ratio, the reason. Then the cockpit locks.

SYSTEM-2 · THE COMMITTEE

System-1 Judges. System-2 adjudicates. Alternate data sits like a credit committee — GST gaps, circular-trade flags, registry hits — and only then does the health band move. The model never writes a ratio. Code does.

Alternate data, like a committee.

No single source gets a veto. The file is the argument between them.

01

Cash-flow

Account Aggregator streams and velocity.
What moved, how often, with whom.

02

Tax spine

GSTR-1 vs GSTR-3B. Turnover whether the
GSTN attested — or not.

03

Ledger hygiene

Circular trading, related-party loops, spoofed
PDF artifacts the eye skips.

04

Registry truth

MCA, CIN, e-Courts. The firm that exists on
paper versus the firm on files.

05

Behaviour

Seasonality, bounce patterns, concentration.
Stability the bureau never saw.

06

Policy rail

RBI Digital Lending language. A decline that
can be written down, not waved at.

Every number is a line. Then the cockpit locks.

01

Cite

The ratio points at the statement line, the GST cell, the AA transaction. If it cannot point, it does not score.

02

Show the working

XAI drawer opens the chain: extract → compute → band. The officer does not have to trust a black box the RBI already banned.

03

Lock the file

Once the committee settles, the cockpit freezes the evaluation. Audit trail, timestamps, model version. No quiet rewrite after the fact.

04

Hand to the human

Credit officers hold the decision. Artificer is the file they used to assemble by hand — finished, cited, and cheap.

Bootstrapped. Recognised. Shipping the MVP.

₹50

List price per evaluation

UNIT ECONOMICS

Gemini cost	~8.0k tokens / file · \$0.02
Manual review	\$80–\$110 a file · 3–5 days
Artificer TAT	<55 seconds, streamed
Gross on eval	₹50 list vs two cents of inference

WHO BUYS

Buyers: CRO / CCO, Head of MSME.
Users: Credit Officers.

API evaluations plus enterprise licences — not a consumer app. The bank already pays \$80–\$150 to read the file. We sell the same file, cited, in under a minute.

The MVP already runs on Vertex.

Not a slide-ware architecture. The organisation, the model, the SSO, the invoice.

Vertex AI / Gemini

Grounded scoring, temperature-0 runs, citation-led. The fleet is already on the project.

GCP organisation

The company account is live. No greenfield cloud to procure before a pilot can start.

Google SSO

Officer workbench after CX. The bank's identity, not another password.

Startup programs

Google AI Startup Program · Google Cloud Startup. The relationship is already named.

Credits on the seat. No new cloud to buy.

Evaluation credits

Per-file API meter. ₹50 list. The bank pays for the files it actually opens.

Enterprise seats

Officer cockpit licences on top of the API. The human who locks the file.

Already on the org

Vertex project, billing account, IAM — standing. Procurement is a licence, not a migration.

What we want from Google

Distribution into MSME lenders on GCP, Vertex credits to keep the \$0.02 file honest, and the room to put Artificer in front of a CRO.
a CRO.

GOOGLE FOR STARTUPS · BUILDERS PITCH FEST

Enver AI Tech. Artificer is the MVP.

Gemini that can show its working — for the MSMEs bureaus cannot see.
